

Joomla Commercial Components Mega-Pack

*Demonoid-Exclusive Torrent
By FrailWords*

A Note From Me: Included in this release are commercial, paid-for, components for Joomla. Some of the best that I have had an opportunity to get my hands on. No templates or free modules, there are tons of those releases out. But a release like this has simply never been seen before on a torrent, so enjoy. If I could have found something like this a year ago, I would have been thrilled, and I hope you are, too.

All of the below descriptions and screen shots have been taken off of Joomla.org's extension directory or from the author's website. I have included them so that you do not have to spend hours trying to figure out what a particular component does, or looking it up. If you need any further info on any of them, then you can figure out where to go from there.

Do not get the impression that I am promoting any of these titles, telling you that these are the most up to date versions (at the time of this posting, 98% are up to date), or telling you that there aren't bugs or problems with them. This is simply a package of good, commercial components so that you won't have to spend a fortune trying to get a good Joomla site going.

If you have any good quality commercial components and would like to share them, drop me a message on Demonoid and I will be happy to add them to future updates of this package. It is my desire to update this package every couple of months, but I need help from the community to do that.

This package will be seeded by me for two weeks after its inception. After that, it is up to the community. Let's seed and keep the sharing going. It's a pleasure to be able to give something back to the community!

iJoomla Magazine v1.1.2 (Nulled)

iJoomla Magazine is one of the most needed component ever developed for Joomla. It allows you to create a magazine layout for your Joomla site that either wouldn't be possible otherwise or would require a great deal of additional programming. Site created with iJoomla Magazine look more professional and don't look like a "blog".

- * Make your home page look great!
- * Add horizontal and vertical items
- * Add attractive quotes to your article pages
- * Control the style of your pages with speical CSS
- * Total layout control of your home page
- * Create an unlimited amount of home pages using issues
- * Add sidebars to your articles
- * Use sidebars for Google AdSense, banners or other articles
- * Display "more articles by this author" and "related articles"
- * Display author mini profile on article page
- * Show a list of authors
- * Increase revenue with banners or Adsense
- * Add 7 modules and 1 mambot
- * Left side navigation for easy access
- * Works with any template
- * SEF support
- * Free professional support
- * Free upgrades for life!

JomComment : AJAX Powered Joomla Comment Component

JomComment is an AJAX-powered Joomla comment component. We use it here in JoomlaHacks.com as a replacement of the good old AkoComment component. AJAX-powered means that comments are updated to the content page without reloading the entire screen. Another nice feature of JomComment is the built-in spam protection. When we were still using AkoComment, we

receive hundreds of spam everyday. And integrating a 3rd party spam protection is somewhat time consuming. I'd rather pay someone \$12.50 rather than deal with the hassles. That amount is just about your lunch money.

JomComment Features: AJAX-powered - Comments are added on the fly without reloading the entire page **SPAM Protection** - Fight SPAM bots and v!@gra(h) vendors! SPAM litters your fine looking website - fight SPAM with Jom Comment's advanced Captcha (image challenge) technique. You can also block specific IP address from adding new comments or allow only registered members to post comments. **Personalize Templates** - Change from one look to another just by selecting a new template! **RSS Feed** - Visitors can get RSS feed of comments posted to a particular content. **Import AkoComment and ComboMax data** - If you use AkoComment or ComboMax, switching is easy! You can copy old comments to JomComment by just a click of a button. **"Read More" Integration** - You can integrate "Read more..." link in the same line as "Add comments". Take a look at how this works in our front page. Your website looks extremely professional and it doesn't make your comment system look like a hack job. **Language Support** - Jom Comment supports data in the universally accepted future format, utf-8, which means YOUR language will be supported (eg, Russian, Arabic, Hebrew, etc).

Special Features: Gravatar Support - Bring your Global Avatar everywhere you go. Jom Comment let's you have that personal touch alongside your comments! **Sliding Feature** - Sliding effect options for the input form and comment. **Word-Censor** - You can block some words from your comments completely, or have the option to make it look this way - c*****d **Comment Moderation** - Moderate comments before they get posted. Take control of who says what at your website!

Jomres, Joomla's favourite booking management application

Jomres is the only fully functional reservation management application for Joomla. It offers a complete range of options and includes many features unique to Jomres. This enables you to realise an early return on your investment. Payback is effectively the first or second booking you take on-line.

- Full real-time property availability for managers and clients.
- Unlimited number of properties and rooms.
- The most highly configurable system for Joomla.
- Multiple tariffs, weekday, weekend, summer, public holidays etc.
- 20 + Mini-components.
- Full multi-language support
- Multi secure payment gateways.
- Billing management.
- Unlimited range of optional extras at booking time, evening meal, newspaper, parking etc.
- Huge knowledge base and renowned support.
- Templating system used throughout, custom look easily achievable.

The Mambo Media Project (MOSMedia) is an exciting enhancement to the Mambo content management system. With this tool, you will be able to effortlessly manage the storage and display of your multimedia files.

Mosets Tree 1.55 w/All Modules included

Mosets Tree is a directory extension for Joomla!. This is the extension that powers the Joomla Extensions Directory at <http://extensions.joomla.org>

You can use Mosets Tree run a complex Yahoo! style directory directly inside your Joomla! website. Mosets Tree is designed to handle any data that requires a directory structure such as a Business Directory, Links Directory and Scripts Directory.

Because Mosets Tree runs on Joomla!, you have infinite possibilities to include more features to your website by using third party CMTs downloadable from Joomla! Forge. The latest release of Mosets Tree 1.5 introduces a new technology that makes your directory run faster, even with up to one million listings and 10,000 categories! No directory component for Joomla! can claim that. Mosets Tree make sure your directory run faster.

If you have an existing Joomla website, you can install and run Mosets Tree in no time. We have 2 pre-installed Tree Templates ready to use for local business directory and links directory. If you're feeling creative and wants something different, customize the template! We make it easy and flexible for web designer to modify the templates without touching the core codes.

Multisites Site Manager component

USER: "Welcome to all of the courses/subsites at the XX Company"- site, where the Registered User, when logged in, can see a list with the courses/subsites, he is enrolled into. He clicks on a course/site link and is taken to the Home page at the selected course/site, where he by auto is logged in as a Registered User - ready to navigate all menu items only

shown for Registered Users.

ADMIN: When logged in as an administrator in the back end of Joomla!/Mambo the admin user can see a menu item in Components called Multisites and can: Create/update/delete and look at a list of courses/sites (that all ready are made in separate folders each containing a total Joomla site **OR** can be made by auto incl. configuration.php!!!!) Create/update/delete users with all user data (user, username, password - also via batch import) Enroll/unenroll users into courses/subsites (also via batch import) When submitting: the changes are updated in the database/in the database for each course. You can either have a central database or a database for each course/site. Then there is no need for hacking the courses/sites (if you want login on the courses/sites to be done by auto you must install a extra component in each course/site. This component is included in the download.) – you can use standard Joomla/Mambo sites. Beside that you have several possibilities when doing the menu item for the Sites/Courses list to be shown:

PDF Indexer

This Joomla Component allows you to index PDFs on your site and the corresponding mosbot allows that index to be searched using the Joomla search component. This allows the text of PDFs to be viewed when searching a Joomla site

Phil Taylor's Knowledgebase FAQ Component for Joomla!

This Joomla Component eases the creation of an online FAQ area or knowledgebase area of a Joomla powered website. Using the integrated Joomla and mosKnowledgebase admin console you can create FAQs for your site easily and quickly. mosKnowledgebase has an AJAX powered administrator control panel making the administration of the knowledgebase much faster than normal forms based navigation. AJAX is also used for article commenting, rating and email-to-friend features making this Joomla component

one of the fastest to interact with.

Phil Taylor's mosDirectory

mosDirectory is a Joomla Component for creating a web based directory like yellow pages by using Joomla! This Joomla Component can be used as a directory system to display businesses, schools, clubs, office locations or any other object that has an address. mosDirectory was the first ever directory component for Mambo/Joomla!

Phil Taylor's mosGuestBook

mosGuestbook allows you to accept and moderate guestbook signing from the visitors and readers of your site. They can leave their name, email address and website address leaving a comment.

- Simple to use - no programming needed

Installs as a Joomla Component in one click

- Accept comments from passing visitors

No need to register to sign guestbook

- Moderation of Comments

You can hold submitted comments until you have approved them

- Report Bad Comment Feature

Allows the reporting of comments that are 'bad' or offensive

- Full support for basic formatting and Smiley Icons

Express yourself in your comments - let people know you are winking ;-) =

- Template based output

Complete control on what shows where and even what fields are available or displayed

- Very easy to configure

All configuration is done in Joomla Admin Console

- Hides visitors emails from Spam Bots

However you as administrator can see the email addresses, the web browser the user used and even his or her's IP Address.

Phil Taylor's mosIPN - Instant eProduct Delivery

mosIPN takes orders made by PayPal and delivers the software or digital download by Email to the purchaser - all while you sleep!

Phil Taylor's mosListMessenger

mosListMessenger exceeds expectation as a professional mailing list component for Joomla, allowing you to send emails to 1000's of people using Joomla! mosListMessenger is a Joomla Component that, with the help of such open source projects as PHPMailer, PCLZip and PHPSniff, exceeds expectations as a well designed, easy to use and extremely robust mailing list management solution for any Joomla Powered web site. ListMessenger is feature packed but because of its intuitive design remains simple enough so any

administrator can quickly manage his or her own mailing list and send out important newsletters or information to their subscriber base.

Phil Taylor's mosLock

mosLock takes orders made by PayPal and creates registered users on your Joomla website. Use this to charge for entry to your Joomla site.

Phil Taylor's Phil-A-Form

Phil-A-Form allows you to generate forms in Joomla, easily create dynamic forms using this component and no programming knowledge needed! Results can be emailed to anyone, or saved in a database - or one of many other actions! All form elements are supported, along with simple and complex validation rules powered by Javascript. If you don't know any HTML don't panic - Phil-a-form will take care of that for you, however if you want the form to display using your own HTML then that is also possible, just use simple placeholders like {THIS} for your dynamic form elements! Phil-A-Form was the worlds FIRST EVER mambo/Joomla! Form Generator!

SEF advance

SEF advance is a component for Joomla! 1.0 (1.5 version to be available) which will extend its built-in search engine friendly URL functionality and raise it on a higher level. Instead of ordinary Joomla! SEF URLs like: <http://www.site.com/content/view/1/2/> which don't tell much about your content you will get URLs in form: <http://www.site.com/Section/Category/Item/> Because URLs consist of meaningful keywords rather than numbers, SEF advance will drastically increase your search engine positions. For more info read the FAQ and documentation and visit the DEMO site. SEF advance is oldest and most stable SEF component for Joomla! It has been developed and improved for 3 years by a core Joomla! developer.

WYSIWYG Pro Content Editor for Joomla!

With the WysiwygPro Mambot plugin you will be able to edit all your Mambo or Joomla content using WysiwygPro, which means no more mucking around with HTML code and unreliable WYSIWYG editors. The Mambot plugin makes integrating WysiwygPro into Mambo or Joomla super easy. Once installed you will be able to control every aspect of WysiwygPro directly from the Mambot control panel in you Mambo or Joomla admin interface. You will be able to: Specify whether to generate HTML 4 or XHTML 1.0, Specify whether to use "p" or "div" tags for line returns, Specify a style sheet for the editor to use or have it automatically detect and use the style sheet from your default Joomla template, Specify formatting, classes, fonts and font-sizes to appear on the WysiwygPro menus, Specify snippets of HTML code to appear on WysiwygPro's Insert a Custom Object tool, this will give you quick access to design elements you use often, Enable/disable every button and menu, Basically customize every feature without mucking around with scripts and config files!

The plugin will also allow you to: Make links directly to any of the content on your Joomla powered website, insert images without mucking around with "mosimage" tags (but if you like those tags you'll like the fact that the Mambot plugin supports them all), Manage your images and downloadable documents from the WysiwygPro file browsers, Other features: Built in security: only an admin will be able to upload and delete images using the WysiwygPro file managers and you can specify what level of access the front-end Authors, Editors and Publishers are allowed.
